WHAT IS BITCOIN?

- Bitcoin is a new money protocol launched in 2009 in response to the 2008 financial crisis.
- It was developed to be internet native:

without intermediaries
without borders
without governments
without bankers

- Resistant to censorship and inflation.
- On average, every 10 minutes, all global transactions are added to a decentralized record that is not controlled by anyone.

WHY ACCEPT BITCOIN?

- Common payment providers charge up to 4% fees, which you can save yourself.
- With Lightning you can receive your Bitcoin for a small fee. A transaction to you costs you nothing and is credited within seconds - completely WITHOUT a payment service provider.
- You can even receive Bitcoin at a market stall or at a festival without the internet.
- Bitcoin polarises and appeals to interested customers without scaring them off.
- Other companies that already accept Bitcoin benefit from new regular customers

Ready for Contacless Payments

The Bitcoinize Machine

is a Android 12 tablet with a thermal printer and NFC capabilities, optimized for Bitcoin and Lightning Payments with pre-installed apps.
